In the old paradigm, the one of the industrialization age, the required education was minimum. The worker should have not only the willingness for obey, but also manual skills and capacity for understanding instruction. For the knowledge's economy he needs another kind of qualification. The education should be analytic. Completely different of the one we have in Brazil, based on both shallow encyclopaedism and dogmatic. We continue trying to transform the Brazilian young in a French child of XIX century
Mangabeira Unger

“The graduate programs in Brazil generally reply foreigners’ researches and turn around continuously as a “loop”: They form PhD, for forming PhD, who will form PhD... Meanwhile, the structural problems of the country follow without solution”

Silvio Meira

Grand Challenges Scholars Program Workshop – Brazil

Thank you!!
